

Power BI Project Report: Lead Analytics & Sales Performance Dashboard

Prepared for : Knovista Technologies

Prepared by : Mohammed Jaseel N J

Date : June 03, 2026

Abstract

This report presents a comprehensive analysis of Knovista Technologies' lead conversion and marketing campaign dataset using Microsoft Power BI. The project focused on importing, cleaning, transforming, and analyzing marketing and sales data using Power Query, DAX measures, interactive visualizations, slicers, tooltips, drillthrough pages, and bookmarks. The dataset contained lead information, campaign performance metrics, employee activities, sales performance, and marketing costs. Power BI features were used to create an interactive business intelligence dashboard that supports data-driven decision-making. The project successfully generated valuable insights regarding campaign effectiveness, employee productivity, lead conversion performance, and marketing costs.

Contents

1. Executive Summary
2. Introduction & Objectives
3. Data & Methodology
4. Data Cleaning & Transformation
5. DAX Measures & KPIs
6. Dashboard Development
7. Visual Analysis & Insights
8. Interactive Features
9. Business Benefits
10. Conclusion

1. Executive Summary

This project focused on analyzing lead conversion and marketing campaign performance using Microsoft Power BI.

The project involved:

- importing and transforming data
- handling missing values
- validating dataset quality
- creating DAX measures
- building interactive dashboards
- performing campaign analysis
- creating drillthrough and tooltip pages
- implementing bookmarks and navigation

Key findings include:

- certain campaigns generated significantly higher sales
- social media sources produced a large number of leads
- employee performance varied across campaigns
- conversion rates differed among marketing channels
- dashboard interactions improved reporting efficiency

2. Introduction & Objectives

2.1 Objective

The objective of this project was to analyze lead conversion and sales performance data using Microsoft Power BI.

The project aimed to:

- improve data quality
- monitor campaign performance
- evaluate employee productivity
- analyze lead conversion rates
- track marketing costs
- create an interactive reporting solution

2.2 Key Business Questions

1. Which campaigns generated the highest sales?
2. Which lead sources produced the most leads?
3. How effective were employees in converting leads?
4. Which lead statuses occur most frequently?
5. How do leads and sales compare over time?
6. How can interactive dashboards improve business decisions?

3. Data & Methodology

3.1 Data Source

The dataset used for this project was:

Live Project Dataset.csv

The dataset contained information related to:

- customer leads
- marketing campaigns
- sales performance
- employee activities
- lead conversion
- marketing costs

3.2 Data Preparation

Data preparation was performed using Power Query.

The following steps were completed:

- imported dataset into Power BI
- reviewed column data types
- handled missing values
- removed unnecessary columns
- standardized text formatting
- validated numerical fields

4. Data Cleaning & Transformation

Missing Value Handling

Missing values were identified and treated appropriately to improve data quality.

Data Formatting

Formatting improvements included:

- standardizing column names
- correcting data types
- formatting numerical values
- formatting date fields

Data Validation

Data quality checks were performed to ensure consistency and accuracy.

5. DAX Measures & KPIs

The following DAX measures were created:

Total Leads

Measures overall lead generation.

Total Sales

Measures overall sales performance.

Average Conversion Rate

Measures conversion effectiveness.

Total Cost

Measures total marketing expenditure.

6. Dashboard Development

An interactive dashboard was created using Microsoft Power BI.

KPI Cards

The dashboard included:

- Total Leads
- Total Sales
- Average Conversion Rate
- Total Cost

Visualizations

The dashboard included:

Sales by Campaign

Bar Chart

Lead Source Distribution

Donut Chart

Employee Performance

Column Chart

Lead Status Distribution

Donut Chart

Leads vs Sales Trend

Line Chart

Conversion Funnel

Funnel Chart

Campaign Summary

Matrix Table

7. Visual Analysis & Insights

Campaign Performance Analysis

Sales performance was analyzed across marketing campaigns.

Finding

Certain campaigns generated significantly higher sales.

Business Insight

High-performing campaigns should receive greater marketing focus and investment.

Lead Source Analysis

Lead sources were analyzed to identify effective acquisition channels.

Finding

Some source platforms generated more leads and sales.

Business Insight

Effective lead sources can improve customer acquisition efficiency.

Employee Performance Analysis

Employee productivity was evaluated using sales metrics.

Finding

Some employees consistently achieved better sales performance.

Business Insight

Performance tracking helps improve productivity and training decisions.

Lead Status Analysis

Lead status distribution was analyzed to understand the sales pipeline.

Finding

Many leads remained in intermediate stages while others were successfully converted.

Business Insight

Monitoring lead stages helps improve conversion management.

8. Interactive Features

Slicers

The dashboard included slicers for:

- campaign_name
- source_type
- lead_status
- assigned_to

These slicers allow dynamic filtering.

Tooltips

Custom tooltip pages were created to display:

- campaign name
- total leads
- sales
- conversion rate
- total cost

Drillthrough

A Campaign Details page was created for detailed campaign-level analysis.

Users can drill from the main dashboard into campaign-specific information.

Bookmarks

Bookmarks and navigation buttons were implemented to improve user experience and dashboard navigation.

9. Business Benefits

The dashboard helps visualize:

- campaign performance
- sales trends
- employee productivity
- lead conversion metrics
- marketing expenditure

The dashboard improves reporting quality and supports data-driven decision-making.

10. Conclusion

This project successfully demonstrated the process of importing, transforming, analyzing, and visualizing marketing campaign and sales data using Microsoft Power BI.

Power Query, DAX measures, KPI cards, charts, slicers, tooltips, drillthrough pages, and bookmarks were implemented to create an interactive business intelligence solution.

The dashboard generated meaningful insights regarding campaign effectiveness, employee performance, lead conversion, and marketing costs, enabling better business reporting and decision-making.
